What Has Changed at Arsenal?

Performance Analysis (Premier League)

Ashanti Chauke

Business Intelligence Portfolio Project

April 2026

Business Understanding

Aim

The aim of this project is to analyse Arsenal's Premier League performance across multiple seasons to identify how key performance indicators (KPIs) have changed over time. The analysis evaluates whether improvements in attacking output and defensive performance have translated into stronger league outcomes and sustained title competitiveness.

KPIs Analysed

The following KPIs were used to evaluate performance trends:

- Goals Scored → Measures attacking effectiveness
- Goals Conceded → Measures defensive stability
- Points per Season → Measures overall success
- League Position → Measures competitive ranking
- Points per Game (PPG) → Measures performance consistency
- Win Percentage → Measures match success rate
- Top Scorer Goals → Measures individual attacking contribution

Business Questions

This analysis aims to answer the following:

- How was Arsenal's overall league performance changed across recent seasons?
- To what extent does attacking output (Goals Scored) influence league performance?
- How has defensive performance (Goals Conceded) contributed to league position?
- Has performance consistency improved when measured using Points per Game (PPG) and Win Percentage?
- How important are top scorer contributions in supporting overall team performance?
- Is recent performance consistent with sustained title competitiveness?

Data & Method

Data Scope

The dataset includes Arsenal's Premier League performance data from the 2020/21 season to the 2025/26 season.

Only league matches were included to ensure consistency when comparing performance across seasons.

Note: 2025/26 data reflects results up to April 2026. Final totals will update as the season progresses.

Methodology

Data preparation was conducted using Microsoft Excel to Structure the dataset and calculate additional performance metrics.

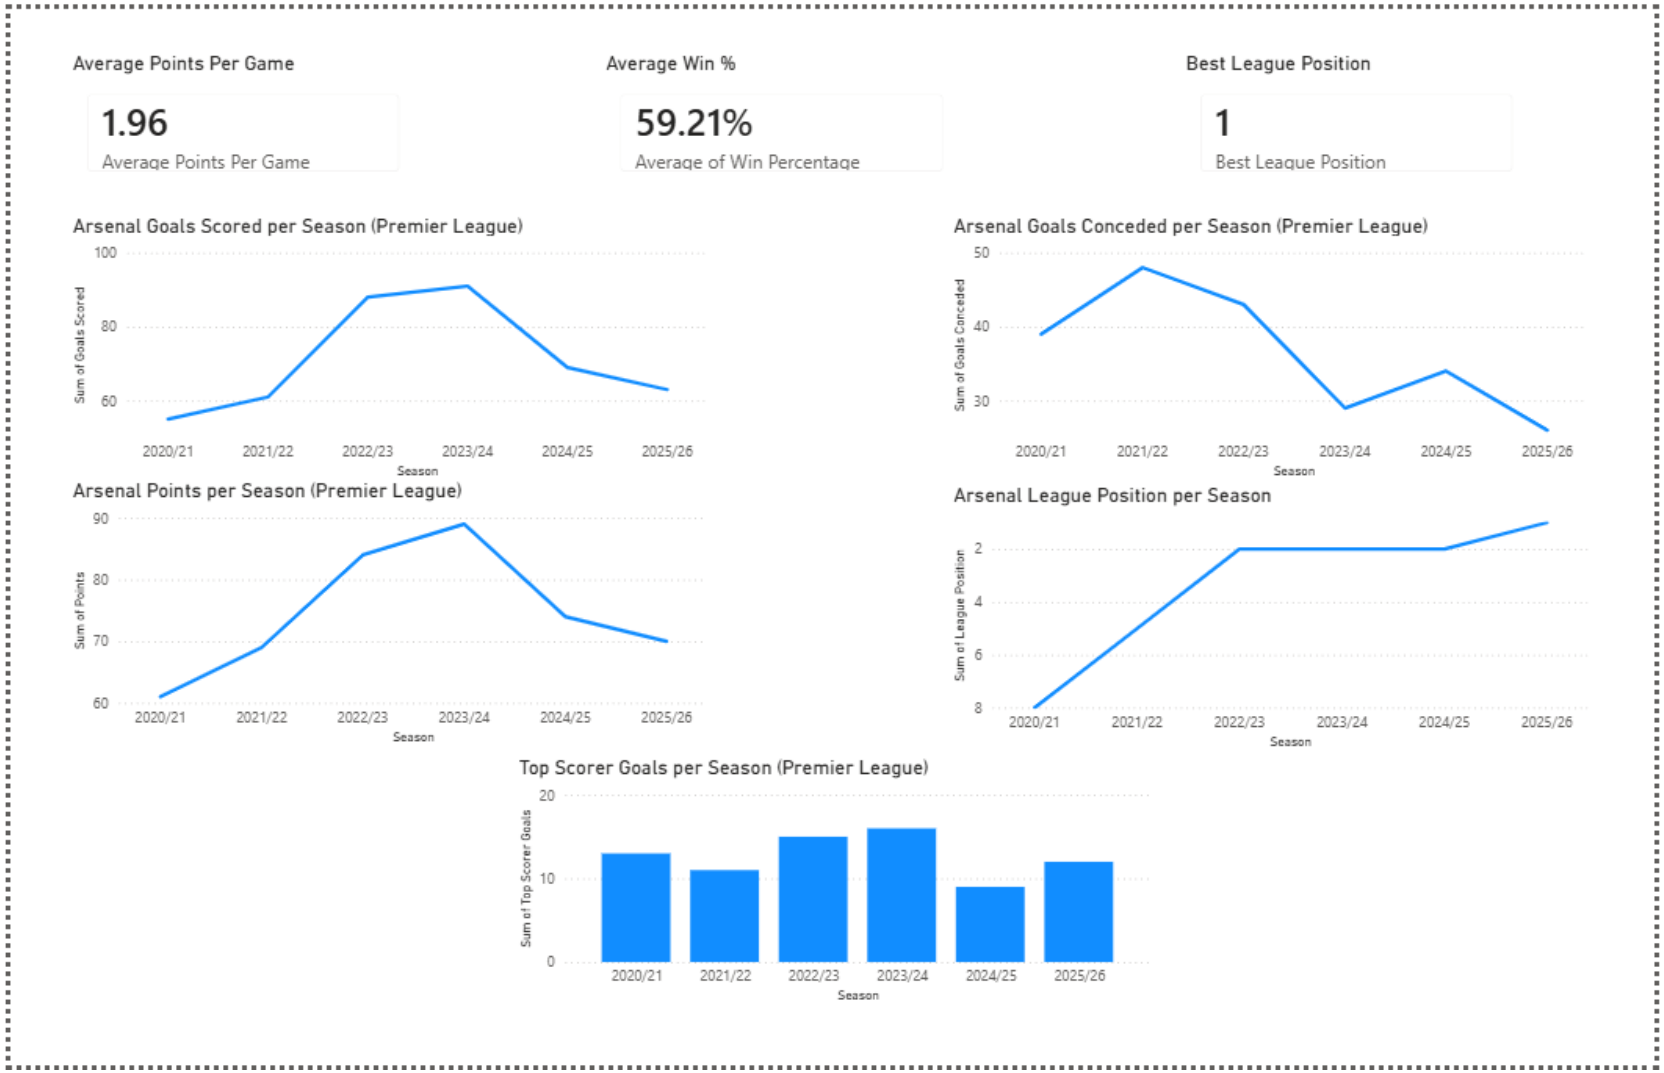
Calculated fields included:

- Goal Difference
- Points per Game (PPG)
- Win Percentage

A chronological season index was created to ensure accurate trend analysis across time.

Power BI was used to create data visualisations to identify patterns and relationships between performance indicators and league outcomes.

Arsenal Performance Dashboard (Premier League)



Insights & Recommendations

Key Insights

- Goals scored increased significantly between 2021/22 and 2023/24, reflecting improved attacking performance.
- Defensive performance strengthened during peak seasons, contributing to improved league results.
- Points per Game (PPG) shows improved performance consistency across seasons.
- League position improved from 8th place to consistent top-table finishes.
- 2025/26 season is ongoing; totals will update as more matches are played.
- Top scorer trends show relatively consistent attacking contribution across seasons.

Recommendations

- Maintaining stable Points per Game (PPG) appears strongly linked to sustained competitiveness.
- Balanced attacking output and defensive consistency provide strong indicators of league performance.
- Monitoring goal difference and PPG can support early identification of performance trends.
